Q Can you run *these data quality reports on more than one project at a time? And are they internal reports or do they require an export?*

A Yes, you can run the data quality reports on more than one project at a time. For example, the PDDE report allows you to do this and provides an synopsis of projects in a formatted report within the application. You can also export the data to Excel if needed for additional analysis.

Q How do I add a *COC to COC filter?*

A You can add a COC to the COC filter via the Implementation Information section in the workgroup. Select "HMIS" from the multi-select field, and then choose the applicable CoCs, which will be available in the LSA export and reports.

Q How to report *flags for the FY24 LSA?*

A First, a note: It's best to have your flag files on hand to help us triage issues early on—e.g. figure out if there's a problem with our logic as opposed to data quality, etc. Just in general, the more information we have to start with, the faster and better off it'll be!

To report flags for the FY24 LSA, submit them as a support/work ticket including "2024 LSA flag" in the subject. Attach the flag files in the ticket, and include the COC ID and any specific flags you need help with. Ensure the option to send to ClientTrack is selected so the support team receives your ticket. If you don't select this ClientTrack/Support will not receive your ticket.
